Swift · swiftui · XCode · C++ 20 · g++/clang · Conan · Boost Test · fakeit
Side experiences with: Python, Go, Ruby

DevOps / Sysadmin
Linux · Shell/Bash · Docker · Jenkins · Gitlab · Ansible · Infra as Code · Kibana / ELK stack · Prometheus · Grafana

PROFILE
Passionate about new technologies, concepts, products and innovative businesses, I have over **18 years of experience** in **many languages, frameworks, business sectors** and work environments. I am a real team player, and I am very adaptable.

EXPERIENCE

Conscience Robotics – Partner & Architect – since 2021
I am in charge of Conscience software's **architecture**, tech teams **coordination**, **quality** insurance, **continuous integration & deployment**. I also contribute to the **product management**, collecting requirement from users across multiple business sectors (medical, construction, sport, industry, education & more).

Okolo – Senior Developer & Architect – since 2021
I joined Okolo as an **experienced developer** and have been working hand in hand with the CTO to take the product to the next level of maturity. We design the **product road map** with the CEO and then integrate new features, week after week, enhancing the **architecture** to best suit business needs.

WildCodeSchool – Instructor – since 2023
I joined WildCodeSchool, a french online school, as a part time **instructor**. By teaching students to become **licensed developers in France** (CDA RNCP 37873), I reinforced my **communication** and **pedagogic** skills.

IDCapture – CTO – 2013-2020
As a **CTO**, I implemented appropriate ways of working for the teams to collaborate efficiently together, such as **Scrum** methodology, **Product vision** with a clear road map / backlog, **Software Factory** with SCM/CI/CD, Quality Assurance & **Software Craftmanship** practices. This experience was a real challenge due to the amount of **legacy** in this project when I arrived. I enhanced the architecture so the app would both scale and be flexible enough to fit multiple specific customer needs.

JSweet - Co founder & developer – 2017-2022
I worked with a former teacher & colleague on an **Open-Source** technology named JSweet to transpile from Java language to JavaScript. I discovered open-source oriented business models and how to **manage a community**.

CA-CIB - Agile CRM developer – 2009-2013
I started as a junior **developer** and contributed to numbers of features and refactorings in an **Agile** organized team. Process and tools were imagined together to best fit context. I then became **leader** of the dedicated **client team**.

EDUCATION
ISEP - Institut Supérieur d'Electronique de Paris – Engineering Degree, 2009
Network & telecommunications – Caen – DUT, 2006
